

01 / INSTITUTIONAL ORIENTATION · START HERE · 5 MINUTES

Understanding EPFO.

A CTO's guide to the people, decisions and money
behind the portal.

Start with the member's need. Follow the employer's obligations, the office's authority and the record of what actually happened. Then locate the software that supports each handoff.

14 process families

6 recorded claim journeys

Interactive graph + printable edition

SYNTHETIC DEMONSTRATION — NOT AN OFFICIAL EPFO SYSTEM

This handbook explains the repository's model. It is not an official EPFO manual, current eligibility determination or production-system inventory. Scheme rules, delegations, rates and tax examples require applicable authoritative sources.

Know what each statement establishes.

Source references A Manuals, circulars and official links recorded by the repository. Their legal authority, dates and applicability must be reviewed separately; a handbook summary does not amend a scheme or law.	Repository model B Documented roles, activities, state machines and service ownership. Some are planned or inferred. A described process is not proof of implemented behaviour.
Verified POC observations C Passing UI tests, completed manifests and hash-checked screenshots from one frozen synthetic run. Only the recorded assertions and selected cases were verified.	Proposals & questions D External-portal integration designs and CTO review questions. These are recommendations for discussion, with implementation gaps stated explicitly.

Three benefit contexts, one member's life.

EPF Provident fund Employment-linked contributions, balances, advances, transfers and settlement. The central technology question is whether identity, entitlement and every financial movement remain traceable.	EPS Pension Service and entitlement records support pension benefits. Recurring pension, family pension and a withdrawal benefit are different journeys; they must not be represented as one generic claim.	EDLI Insurance A death-related insurance benefit context. A beneficiary may need PF, pension and insurance processes arising from the same life event, with separate records and decisions.
--	--	--

Orientation synthesis: docs/stakeholders.md, F04–F05 in docs/stakeholder-activities.yaml; source register PEN, EDLI, SCHEMES. No benefit rates or current eligibility are asserted here.

Who needs what?

Actor or office layer	Responsibility to understand	Record to follow
Member / worker	Identity, employment history, contributions, claims and service issues	Person → employment record → ledger → claim / grievance
Pensioner / family / beneficiary	Benefit entitlement and continuing or death-related services	Pension or beneficiary evidence → award / claim → payment

Actor or office layer	Responsibility to understand	Record to follow
Employer	Establishment records, employment reporting and contribution obligations	Establishment → authorised representative → filing → payment
Operator / signatory	Preparation and authorised attestation are distinct duties	Dated grants, approved filing version and signature / intent evidence
Regional office and field officers	Scrutiny, authorised decisions, cash operations, compliance and service response	Assigned case, jurisdiction, decision round and financial outcome
Zonal / headquarters roles	Escalation, oversight, policy administration and operations monitoring in the repo model	Exception report, escalation, rule version and corrective action
Trust / bank / identity / other partners	Distinct institutions supplying records, verification or payment outcomes	External reference, authenticated response and reconciliation
Governance / audit	Accountability, evidence and follow-up across decisions and money	Finding → management action → verified closure

Repository stakeholder synthesis, not a current organisation chart. 114 catalogue entries include officer roles, external entities and proposed roles. 21 interface surfaces are channels; neither count means that many independent business stakeholders.

One person. Many records. Several connected processes.

01

Join employment

The establishment and the worker are linked. Identity, member ID, UAN and KYC need consistency. Employer authority and worker identity are separate checks.

F01 · F02

02

Build the contribution history

The employer prepares and approves a periodic ECR. Payment is confirmed, then the contribution ledger is posted. The member's visible balance must reconcile to the underlying journal.

F03

03

Change jobs or correct a record

Employment ends or moves. Exit details, transfers and profile corrections may involve several offices or institutions. The person remains the same while employment-specific records change.

F02 · F04

04

Request a benefit

An advance, final settlement, pension or beneficiary claim needs applicable eligibility and evidence. Office scrutiny, authorised decision and financial execution are distinct responsibilities.

F04 · F05

05

Continue service, resolve exceptions

Life certificates, bank changes, payment returns, grievances, late credits and family changes continue beyond the first decision. A terminal claim state is not the end of every member service.

F05 · F08

Follow five questions through every lifecycle.

Who is the person and authorised actor? **What** business record is changing? **Which authority** permits the decision?
What money moved or remains pending? **Which evidence** proves the outcome?

Conceptual reading path synthesized from F01–F05 and F08. These stages are not one recorded end-to-end production transaction.

Find the handoff.

Then inspect the responsibility.

The landscape connects the main life events. The role view groups the selected process's documented activities by actor and shows handoffs from their `next` references. The service view shows the handbook's ownership synthesis. Select a node for details; keyboard users can Tab to a node and press Enter.

Conceptual process landscape. Arrows show orientation connections; they do not establish recorded execution or a complete legal sequence. Detailed paths follow below.

F01 · Establishment
Registration evidence → office scrutiny → establishment decision → signatory and operator grants

F02 · Member identity
Employment link → member identity / KYC → verification → correction review → updated record

F03 · Contributions

Prepare ECR → validate → signatory approval → submit / TRRN → payment confirmation → ledger posting

F04 · Claims & transfers

Application → eligibility / risk checks → docket and scrutiny → authorised decision → payment → member outcome

F05 · Pension

Application and service verification → pension decision / PPO → disbursement → life certificate and subsequent changes

F06 · Compliance & recovery

Signal / inspection → case → notice and hearing → reasoned order / assessment → demand → payment or recovery / appeal

F07 · Freeze & vigilance

Risk / request → freeze review and order → enforce hold → de-freeze decision → fresh scrutiny where required

F08 · Grievances

Register → competent-office routing → assignment → response / escalation → resolution → feedback / reopening

F09 · Exempted trusts

Exemption / trust oversight → periodic returns → member-account reconciliation → inspection / transfer issues

F10 · International workers

Worker classification → supporting agreement / coverage evidence → certificate or contribution treatment → applicable benefit process

F11 · Inoperative accounts

Locate account → establish identity / entitlement → reconcile historical records → authorised settlement or continued investigation

F12 · Audit

Audit scope → evidence / observations → management response → corrective action → verification and closure

F13 · Governance & reporting

Operational records → defined metrics / reports → regional and zonal review → headquarters / governance decisions

F14 · Technology & security

Identity / staff posting → scoped authority → secure transaction → monitoring / incident response → review or revocation

Activity evidence labels from the repository: **V** screen / menu observed in source research; **D** process described; **U** inferred and requiring domain confirmation. These labels do not mean a current UI test passed. Planned activities retain their future flag.

What starts it. What changes. What can go wrong.

These 14 notes summarize the repository’s process taxonomy. Their paths describe business concepts and planned scope as well as working POC functions. Use the graph and endpoint-status legend to inspect the implementation inventory. Only section 05 presents recorded UI outcomes.

F01 · REPOSITORY SYNTHESIS

Establishment onboarding, signatories and configuration

TRIGGER	An employer needs to enter the covered establishment ecosystem or change authorised representatives.
TYPICAL HANDOFFS	Registration evidence → office scrutiny → establishment decision → signatory and operator grants
BUSINESS RECORD	Establishment registration, identifiers, jurisdiction and dated authorisations.
CONTROL TO UNDERSTAND	Distinguish the owner, preparer and signatory. Check who may act for which establishment and when a grant ends.
EXCEPTIONS TO ASK ABOUT	Incomplete registration; verification failure; signatory revocation; change of jurisdiction.
CTO QUESTION	Which source owns establishment identity, coverage status and signatory authority?

Reference keys: CMP · SOP-B. Ownership in the POC: employer-service, platform-service.

Member onboarding, KYC and profile correction

TRIGGER	A worker joins, links employment or needs identity, KYC or profile corrections.
TYPICAL HANDOFFS	Employment link → member identity / KYC → verification → correction review → updated record
BUSINESS RECORD	UAN, employment-specific member record, verified attributes and correction history.
CONTROL TO UNDERSTAND	Separate a person from an employment account. Corrections must preserve the old value, evidence and approving authority.
EXCEPTIONS TO ASK ABOUT	Duplicate or mismatched identity; failed bank validation; pending employer attestation; disputed date of exit.
CTO QUESTION	How are duplicates, identity mismatches and employer-independent corrections resolved?

Reference keys: JD · WSU · SOP-B. Ownership in the POC: member-service, employer-service, workflow-service.

ECR, challan, payment and contribution posting

TRIGGER	The employer reports the contribution period and pays the associated liability.
TYPICAL HANDOFFS	Prepare ECR → validate → signatory approval → submit / TRRN → payment confirmation → ledger posting
BUSINESS RECORD	Filing version, payment reference, balanced journal and member contribution statement.
CONTROL TO UNDERSTAND	Preparation and approval are different duties. Payment confirmation and member ledger posting are separate events; reconcile both.
EXCEPTIONS TO ASK ABOUT	Validation errors; return to preparer; unpaid filing; bank failure; confirmed payment awaiting posting; supplementary corrections.
CTO QUESTION	Can every payment be traced to one filing and exactly one balanced posting?

Reference keys: MAP · CMP. Ownership in the POC: contribution-service, employer-service, payment-simulator.

PF claims, transfers and death / EDLI claims

TRIGGER	A member or beneficiary requests an advance, final settlement, transfer or death-related benefit.
TYPICAL HANDOFFS	Application → eligibility / risk checks → docket and scrutiny → authorised decision → payment → member outcome
BUSINESS RECORD	Claim, approval round, decision evidence, payment instruction and ledger / notice outcome.
CONTROL TO UNDERSTAND	An approval is not proof of payment. Return for rework, final rejection and payment return are different business outcomes.
EXCEPTIONS TO ASK ABOUT	Missing evidence; freeze / hold; return to initiator; rejection; payment return and bank correction; transfer-in or later credits.
CTO QUESTION	Which evidence and rule version made the decision reproducible, and what remains outstanding after approval?

Reference keys: MAP · EDLI · SOP-B. Ownership in the POC: claim-service, workflow-service, contribution-service, payment-simulator.

Pension: application, PPO, disbursement, life certificate

TRIGGER	A member or family seeks pension benefits, or a pensioner needs continuing disbursement services.
TYPICAL HANDOFFS	Application and service verification → pension decision / PPO → disbursement → life certificate and subsequent changes
BUSINESS RECORD	Pension application, service / family evidence, PPO and continuing payment history.
CONTROL TO UNDERSTAND	Keep recurring pension (Form 10D) distinct from pension withdrawal benefit (Form 10C). A PF balance is not an EPS benefit calculation.
EXCEPTIONS TO ASK ABOUT	Service gaps; family or nominee disputes; bank change; life certificate not recorded; revised entitlement.
CTO QUESTION	Who owns pension entitlement, recurring payment reconciliation and survivor changes?

Reference keys: PEN · MAP. Ownership in the POC: pension-service, member-service, payment-simulator.

Compliance, inspection, quasi-judicial proceedings and recovery

TRIGGER	A discrepancy, inspection or default needs scrutiny, proceedings, assessment or recovery.
TYPICAL HANDOFFS	Signal / inspection → case → notice and hearing → reasoned order / assessment → demand → payment or recovery / appeal
BUSINESS RECORD	Case evidence, procedural notices, orders, demand references and recovery status.
CONTROL TO UNDERSTAND	Keep procedural due process and signed orders separate from a financial demand and its ledger. Notice, hearing, order, appeal and recovery contracts include planned scope.
EXCEPTIONS TO ASK ABOUT	Contested facts; rescheduled hearing; appeal or stay; partial payment; corrected or superseded order.
CTO QUESTION	Can an external proceedings portal send an accepted order without directly writing the financial ledger?

Reference keys: CMP · ICF · REC. Ownership in the POC: compliance-service, contribution-service, workflow-service.

Freezing, de-freezing, fraud and vigilance

TRIGGER	A risk signal or order restricts activity, followed by review and possible release.
TYPICAL HANDOFFS	Risk / request → freeze review and order → enforce hold → de-freeze decision → fresh scrutiny where required
BUSINESS RECORD	Restriction scope, order, evidence, effective time and release history.
CONTROL TO UNDERSTAND	A hold changes what transactions may proceed. The POC models de-freeze as a fresh approval round where appropriate, not a silent continuation of stale approvals.
EXCEPTIONS TO ASK ABOUT	Wrong account or scope; overlapping restrictions; payment already in progress; stale approvals after release.
CTO QUESTION	Which services enforce an order, and how is complete enforcement proved?

Reference keys: FIA · SOP-B. Ownership in the POC: member-service, employer-service, claim-service, workflow-service.

Grievances

TRIGGER	A person raises a service issue and expects an accountable response.
TYPICAL HANDOFFS	Register → competent-office routing → assignment → response / escalation → resolution → feedback / reopening
BUSINESS RECORD	Grievance, assigned office, correspondence, resolution and escalation history.
CONTROL TO UNDERSTAND	The grievance concerns a transaction but does not replace its underlying decision. Track ownership, elapsed time and evidence of resolution.
EXCEPTIONS TO ASK ABOUT	Wrong office; unresolved response; escalation; reopening; a linked claim that is still pending.
CTO QUESTION	Does closure mean a response was issued, or that the underlying member problem was resolved?

Reference keys: SOP-B · OUL. Ownership in the POC: grievance-service, workflow-service, platform-service.

Exempted establishments (PF trusts)

TRIGGER	An exempted establishment and its trust require returns, oversight and transfers.
TYPICAL HANDOFFS	Exemption / trust oversight → periodic returns → member-account reconciliation → inspection / transfer issues
BUSINESS RECORD	Trust authorisation, returns, member account references and oversight findings.
CONTROL TO UNDERSTAND	Identify which institution holds the PF account and which scheme obligations remain with EPFO. Trust and EPFO records need reconciliation.
EXCEPTIONS TO ASK ABOUT	Late returns; mismatched transfer records; deficiencies; surrender or cancellation of exemption.
CTO QUESTION	Where does trust data become authoritative, and how are member transfers reconciled?

Reference keys: EXM · CMP. Ownership in the POC: compliance-service, contribution-service, member-service.

International workers

TRIGGER	Cross-border employment requires classification and applicable social-security documentation.
TYPICAL HANDOFFS	Worker classification → supporting agreement / coverage evidence → certificate or contribution treatment → applicable benefit process
BUSINESS RECORD	International-worker classification, relevant certificate and dated supporting evidence.
CONTROL TO UNDERSTAND	Country, agreement, coverage dates and worker classification matter. Do not infer legal eligibility from a demo persona or a synthetic rule.
EXCEPTIONS TO ASK ABOUT	Expired or absent certificate; inconsistent worker classification; differing coverage periods; unresolved agreement applicability.
CTO QUESTION	Who validates agreement applicability and preserves the dated documentary basis?

Reference keys: IWU · CMP. Ownership in the POC: international-service, member-service, contribution-service.

Inoperative accounts

TRIGGER	An old or inactive account needs identification, reconciliation or a supported claim.
TYPICAL HANDOFFS	Locate account → establish identity / entitlement → reconcile historical records → authorised settlement or continued investigation
BUSINESS RECORD	Historical member account, identity linkage, reconciliation and decision trail.
CONTROL TO UNDERSTAND	A match is a candidate, not proof of entitlement. Preserve historical identifiers and the evidence used to link them.
EXCEPTIONS TO ASK ABOUT	Missing legacy records; multiple candidate matches; deceased member; disputed entitlement.
CTO QUESTION	How are historical records searched without treating approximate identity matches as confirmed?

Reference keys: MAP · SOP-B. Ownership in the POC: member-service, claim-service, workflow-service.

Audit (concurrent, internal, external)

TRIGGER	An audit cycle or finding requires evidence, response and follow-up.
TYPICAL HANDOFFS	Audit scope → evidence / observations → management response → corrective action → verification and closure
BUSINESS RECORD	Audit finding, cited evidence, accountable owner, action and closure basis.
CONTROL TO UNDERSTAND	A technical event log is not a complete business audit. Trace decisions, money and corrective action together.
EXCEPTIONS TO ASK ABOUT	Unanswered finding; incomplete evidence; disputed observation; action recorded without verified closure.
CTO QUESTION	Can an auditor reconstruct who acted, under what authority, with which evidence and financial effect?

Reference keys: AUD · MAP. Ownership in the POC: audit-service, reporting-service, platform-service.

Monitoring, governance and reporting

TRIGGER	Offices and oversight bodies need operational status, exceptions and public information.
TYPICAL HANDOFFS	Operational records → defined metrics / reports → regional and zonal review → headquarters / governance decisions
BUSINESS RECORD	Report definition, source period, reconciliation basis and resulting action.
CONTROL TO UNDERSTAND	Distinguish counts of applications, decisions, successful payments and resolved issues. Preserve metric definitions and cut-off times.
EXCEPTIONS TO ASK ABOUT	Late events; inconsistent totals; reporting lag; incorrect jurisdiction attribution.
CTO QUESTION	Can a headline dashboard number be reconciled to individual business records?

Reference keys: EC · OUL · WEB. Ownership in the POC: reporting-service, intelligence-service, platform-service.

Technology, security, data protection and training

TRIGGER	People, systems and partners need access, operational support and change control.
TYPICAL HANDOFFS	Identity / staff posting → scoped authority → secure transaction → monitoring / incident response → review or revocation
BUSINESS RECORD	Identity, effective assignment, entitlement, transaction audit and operational incident.
CONTROL TO UNDERSTAND	A staff posting, login identity and business authority are related but distinct records. Reassignment must invalidate stale access and case ownership.
EXCEPTIONS TO ASK ABOUT	Officer transfer; expired delegation; stale projections; replayed callback; unavailable service; conflicting rule versions.
CTO QUESTION	How quickly does a posting change revoke old access across every affected portal and service?

Reference keys: OUL · REF. Ownership in the POC: platform-service, audit-service, workflow-service, mock-integrations.

Watch one case move between people and states.

44 / 116 Baseline cases verified through UI in this run	72 Baseline cases not run	6 Claim journeys selected for this handbook
---	---	---

Run 20260930T091329986617Z used an isolated synthetic fixture with recorded image identities. Replays contain selected business screenshots in their original order; repetitive sign-in and intent-confirmation captures are omitted. Original step numbers and hashes are retained. The fixture is no longer required to read this file.

Mock identity checks, OTPs, bank / penny-drop responses, Table D, signatures and rule calculations remain simulations. Amount bands are illustrative delegations, not claims about statutory authority. A passing case proves its asserted observations in this run, not every input combination or all future source changes.

An advance reaches settlement

Follow one claim through member submission, DA scrutiny, AO approval, cash instruction, balance and notice. Approval and settlement are separate milestones.

CLM-035CD7E4 · SETTLED

Cases: CLM-SETTLE-REVIEW, CLM-DECISION-NODOCKET, CLM-PAY-NOTICE, CLM-WITHDRAW-LATE. 14 selected business captures from 26 recorded steps.

The timeline retains every selected business capture. Four screenshot anchors follow; the portable HTML contains the full selected replay.

Original step	Role	Action / asserted observation
3	Member	Choose the claim and amount Input: Advance for medical treatment; 10000100 paise

Claim summary

You are claiming ₹1,00,001 as 'Advance for medical treatment' (Form 31). Rule: You can withdraw up to your own (employee) share, capped at ₹10,00,000, while still employed. Your maximum today is ₹10,00,000. It is above the automatic settlement limit of ₹1,00,000, so it will be reviewed by: Dealing assistant (accounts) → Accounts officer. The money will be paid to the bank account linked to your UAN. Illustrative rules demo-rules-2026.1 (not official EPFO limits).

30 Sept 2026, 10:20 am	1	Dealing assistant (accounts) 00000000-0000-4000-8000- 000000000006	RECOMME ND 0	Synthetic lifecycle exercise: evidence checked and corrected if required.; KYC verified, Bank account verified, Balance sufficient, No open grievance or freeze
30 Sept 2026, 10:20 am	1	Accounts officer 00000000-0000-4000-8000- 000000000008	APPROVE 1	Synthetic lifecycle exercise: decision evidence checked.

The bank returned the payment and the member gave a new account that passed the (mock) penny-drop check. Approving changes only where the money goes; the claim decision is not reopened.

Decision

☒ Approve

☐ Reject

Reason

Corrected synthetic bank details accepted for re-payment.

Submit action

The bank account cannot be switched at this claim stage.

Claim summary

You are claiming ₹1,00,001 as 'Advance for medical treatment' (Form 31). Rule: You can withdraw up to your own (employee) share, capped at ₹10,00,000, while still employed. Your maximum today is ₹10,00,000. It is above the automatic settlement limit of ₹1,00,000, so it will be reviewed by: Dealing assistant (accounts) → Accounts officer. The money will be paid to the bank account linked to your UAN. Illustrative rules demo-rules-2026.1 (not official EPFO limits).

Claim ID	CLM-B81D94D0
Linked account	AL-0001
Type	31 · ADVANCE_ILLNESS
Rule version	demo-rules-2026.1 ILLUSTRATIVE

Start a claim

DEMO · Claim rules and amounts are illustrative. No real claim or payment is made.

Linked account AL-0006

Employee share

₹18,00,000.00

Employer share

₹12,00,000.00

Total balance

₹30,00,000.00

Advance for medical treatment

Form 31

You can withdraw up to your own (employee) share, capped at ₹10,00,000, while still employed.

Not eligible: This advance is only for members who are still employed.

Pension withdrawal benefit (Form 10C)

Form 10C

With less than 9½ years of pension (EPS) service, two months after leaving you can take the EPS money as a lump sum, by Table D.

Not eligible: This claim can be made once every 1200 months.

Final settlement after leaving employment

Form 19

After leaving employment for at least two months you can withdraw your full balance.

Maximum amount: ₹30,00,000.00

Verify the ledger balance. The visible account total is 3000000000 paise.

PNG SHA-256: 2353c8784de0de52c5ad609c62b8e7aea70787ea7ee019593193ab78d84ba27c

PF Life · Synthetic CTO orientation · 47 / 55

Put boundaries around authority and records.

EXPERIENCE	Public / member / employer / office interfaces One React web application contains multiple channels and role views.
ACCESS BOUNDARY	Gateway + identity provider The browser uses gateway sessions; the gateway brokers access to domain services.
BUSINESS OWNERSHIP	Employer · Member · Contribution · Claim · Pension · Compliance Workflow, grievance, international, audit, reporting, platform and intelligence provide further business or shared capabilities.
SUPPORTING INFRASTRUCTURE	Service databases · events · object storage · simulations The demo uses service-specific database ownership on shared local infrastructure. Payment and external verification simulators are explicitly synthetic.

Repository architecture: apps/web, apps/gateway, services/, packages/, contracts/, infra/. ADR 0001 describes the gateway boundary; ADR 0003 assigns the financial ledger to contribution-service; ADR 0006 describes generated contracts. These are repository decisions, not a discovered map of EPFO production systems.

Record / responsibility	POC owner	Why the boundary matters
Establishment and authorisation	employer-service	Know which person can prepare or attest for an employer.
Member and employment record	member-service	Keep person identity distinct from employment and ledger accounts.
Contribution and financial ledger	contribution-service	Balanced integer-paise journals and reconciliation belong to one financial owner.
Claim eligibility and decision	claim-service + workflow-service	Preserve the decision basis, jurisdiction and approval round.
Pension record	pension-service	Recurring entitlement and payment history have a different lifecycle from a PF claim.
Staff posting / office jurisdiction	workflow-service	Assignment changes need access and case-ownership propagation.
Shared administration	platform-service	Policy and shared administration are distinct from workflow's staff-posting record.

External e-proceedings portal: proposed integration

1. External portal owns notices, hearings, evidence and signed orders.
2. An authenticated adapter accepts a versioned order and its evidence references.
3. Compliance owns the corresponding business case / assessment mapping.
4. A defined financial instruction reaches contribution-service for demand / ledger processing.
5. Reconciled demand and payment status return to the originating portal.

Current limitation: working compliance cases and the VISHWAS-specific `DemandRaised.v1` path do not constitute a generic proceedings-order integration. Notice, hearing, order, appeal and recovery endpoints include planned contracts. A general, versioned assessment / order interface and production authentication, signature and replay controls need implementation and review.

External HRM portal: proposed integration

1. HRM provides a stable employee identifier and effective-dated posting / delegation changes.
2. An adapter maps the employee to identity, office, roles and assignment revision.
3. Workflow, the current POC posting owner, publishes an ordered, versioned staff-assignment change under a proposed revised event contract.
4. Services revoke stale access and release or reassign affected cases.
5. Entitlements and projections are reconciled, with acknowledgement and exceptions back to HRM.

Current limitation: `POST /api/v1/hrm/postings` is an interactive, step-up-protected POC office operation for a known officer. Staff-posting events update service projections, but the reviewed implementation does not by itself update Keycloak role membership or active sessions, and needs assignment-revision / effective-date handling. It is not a ready external HRM feed.

Teams can own domains independently while retaining shared contracts, security conventions, rule versioning and end-to-end assurance. Splitting physical repositories requires replacing root-level build and shared-package dependencies. An organisational ownership boundary can be introduced before that migration.

Implementation review basis: gateway authentication handling; `workflow-service/app/api/hr_routes.py`; `StaffPostingChanged` consumers; compliance `DemandRaised` producer; contribution demand consumer. Integration sequences above are proposals, not recorded portal integrations.

Questions that reveal the operating model.

DAY 1 · PEOPLE & AUTHORITY

Who may decide?

Ask an RO to walk one real anonymised case. Identify the initiating person, authorised checker, office jurisdiction, delegation version and escalation owner. Compare those answers with F01, F02 and F04.

DAY 2 · MONEY & RECONCILIATION

Where is the proof of payment?

Trace one ECR from filing to bank response to member posting, and one claim from decision to debit to bank outcome. Ask what happens when a payment is confirmed but a posting fails.

DAY 3 · EXCEPTIONS & SERVICE

What remains unresolved?

Inspect returned claims, payment returns, freezes and reopened grievances. Establish whether dashboards distinguish these from rejection, successful settlement and actual resolution.

DAY 4 · SYSTEMS & ACCESS

How does a transfer revoke access?

Map HR identity to portal identity, effective posting, delegation and case ownership. Review machine integration audiences, signatures, replay protection, reconciliation and recovery.

DAY 5 · EVIDENCE & ROADMAP

What can the prototype prove?

Review working, mock, planned and unknown endpoint inventory separately from passing tests. Assign owners to inferred activities, unrun case partitions, source validation and production integration gaps.

These are suggested discovery activities. No real member data, credentials or production transaction is needed to use this handbook.

Terms, identifiers and easy confusions.

Term	Expansion / context	What to distinguish
EPFO	Employees' Provident Fund Organisation	The institution around which this prototype models member, employer and office processes.
EPF	Employees' Provident Fund	Provident-fund account and benefit context; keep the balance and ledger distinct from pension calculations.
EPS	Employees' Pension Scheme	Pension context, including recurring pension and eligible withdrawal benefits; this handbook does not determine eligibility.
EDLI	Employees' Deposit Linked Insurance	Death-related insurance benefit context; distinguish it from PF balance settlement and family pension.
UAN	Universal Account Number	Person-level umbrella identifier used to link employment-specific member IDs. A login, a UAN and a ledger account are different objects.
Member ID	Employment-specific member identifier	Identifies a member's employment-linked record; a person may have records across employers.
ECR	Electronic Challan-cum-Return	Employer contribution filing; preparation, approval, payment and posting are separate steps.
TRRN	Temporary Return Reference Number	Filing / challan reference used in the payment journey; it is not proof that the member ledger was posted.
KYC	Know Your Customer	Identity and account verification evidence; simulated verification in the POC is labelled as mock.
DA	Dealing Assistant	Initiating office scrutiny role. The exact authority depends on the process and effective delegation.
SS	Section Supervisor	An office supervisory role used in several illustrative approval chains.
AO	Accounts Officer	Office accounts role; one of the checker roles shown in the recorded claims.
APFC	Assistant Provident Fund Commissioner	Office authority represented in claim decisions and re-payment approval in the POC.
OIC	Officer in Charge	Office authority represented in the larger illustrative settlement chain.
CAD	Claim Approval Docket	POC decision packet: evidence and calculations inspected before recommendation or decision. It is not a digitally signed official order.
PPO	Pension Payment Order	Pension award / payment reference; distinct from a one-time claim reference.
Form 19	Final PF settlement	Benefit context shown in a recorded synthetic settlement; exact real eligibility must come from current applicable sources.

Term	Expansion / context	What to distinguish
Form 10C	Pension withdrawal benefit / scheme-certificate context	The replay shows a synthetic withdrawal benefit, not every Form 10C option.
Form 10D	Pension application	Recurring pension / family-pension application context; no recorded Form 10D replay is embedded.
Form 13	Transfer request	Employment mobility context: reconcile service and balance movement across member records.
TDS	Tax Deducted at Source	The example deduction is generated by illustrative demo rules; do not use it to determine actual tax.
RO / ZO / HO	Regional / Zonal / Head Office	Office levels used in the repository's jurisdiction and escalation model, not a verified current organisational directory.
CBT	Central Board of Trustees	Governance context; the operational office roles and oversight bodies serve different purposes.
CoC	Certificate of Coverage	International-worker coverage evidence; agreement and date applicability need domain validation.
Ledger	Financial journal and account records	In this POC, contribution-service owns balanced postings in integer paise; services must not write another service's ledger tables.
Idempotency	Safe repetition of one business instruction	The same accepted command or event should not create a second payment or posting.
Maker / checker	Separate preparation and approval duties	A distinct authorised person reviews the initiating action; a role label alone does not prove separation of people.
Posting	Financial or staff context	A ledger posting records money. An HR posting assigns an officer to a role / office. Always specify which meaning is intended.

Keep the source beside the explanation.

The register below carries the repository's source pointers. Official search results supplied limited UAN / scheme context; direct official PDF / FAQ retrieval was unsuccessful during handbook creation on 30 September 2026. Links are retained for source-owner review. No linked manual's present contents, legal currency or applicability are certified by this document.

Key	Source pointer	Verification status
MAP	Manual of Accounting Procedure, Part I	Repository reference; current content / applicability not independently verified.
AUD	Audit Manual (repository date: 8 December 2023)	Repository reference; current content / applicability not independently verified.
CMP	Compliance Manual (repository date: 5 February 2024)	Repository reference; current content / applicability not independently verified.
REC	Recovery Manual (repository date: 8 December 2023)	Repository reference; current content / applicability not independently verified.
EXM	Exemption Manual (repository date: 8 December 2023)	Repository reference; current content / applicability not independently verified.
PEN	Pension Manual	Repository reference; current content / applicability not independently verified.
EDLI	EDLI Manual	Repository reference; current content / applicability not independently verified.
SOP-B	Part B: SOPs and service standards	Repository reference; current content / applicability not independently verified.
ICF	Inspector-cum-Facilitator manual	Repository reference; current content / applicability not independently verified.
EC	Executive Committee meeting agenda (98th)	Repository reference; current content / applicability not independently verified.

Key	Source pointer	Verification status
JD	Joint declaration SOP circular (repository date: 1 August 2024)	Repository reference; current content / applicability not independently verified.
WSU	WSU SOP circular (repository date: 2 August 2024)	Repository reference; current content / applicability not independently verified.
IWU	International workers: online Certificate of Coverage circular	Repository reference; current content / applicability not independently verified.
OUL	Office-use portal catalogue	Repository reference; current content / applicability not independently verified.
REF	EPFO reforms: repository reference dated 12 February 2026	Repository reference; current content / applicability not independently verified.
FIA	Freeze / de-freeze SOP reference — see the repository source register / activity definitions for context	Repository reference; current content / applicability not independently verified.
WEB	Public information references in the repository — see the repository source register / activity definitions for context	Repository reference; current content / applicability not independently verified.
UAN	Official UAN FAQ for members; search-index reference, direct retrieval unsuccessful	Repository reference; current content / applicability not independently verified.
SCHEMES	Official EPFO newsletter, October–December 2024; search-index reference, direct retrieval unsuccessful	Repository reference; current content / applicability not independently verified.
FRM	Fraud risk mitigation success story; archived repository reference	Repository reference; current content / applicability not independently verified.
SS	Samadhan Setu issue-tracker extract, 24 September 2026, in ../samadhan-setu files/. Module names / error text are primary issue evidence; explanatory narratives are secondary — see the repository source register / activity definitions for context	Repository reference; current content / applicability not independently verified.
EP	Activity source code EP: authority pointer unresolved in the repository source register; requires domain confirmation — see the repository source register / activity definitions for context	Repository reference; current content / applicability not independently verified.
PD	Activity source code PD: authority pointer unresolved in the repository source register; requires domain confirmation — see the repository source register / activity definitions for context	Repository reference; current content / applicability not independently verified.

Repository evidence register

- `docs/stakeholders.md` — stakeholder taxonomy and source register.
- `docs/stakeholder-activities.yaml` — 238 activity definitions with actor, handoff, source key, evidence label and future flag.
- `apps/web/src/data/system-map.generated.json` — generated interface / role / endpoint inventory snapshot. YAML and the generated snapshot can differ in age.
- `docs/endpoint-catalogue.md` — **W** working POC, **M** mock integration, **P** planned contract, **?** status requiring clarification. These are inventory labels, not test results.
- `init.md` and `docs/adr/` — design / state-machine intent and architectural decisions. Intent can exceed current implementation.
- `artifacts/ui-manuals/20260930T091329986617Z/results.xml`, `runtime.json` and `evidence/*/manifest.json` — run-specific assertions, fixture image identities and original screenshot hashes.
- `scripts/handbook/content.py` — curated orientation notes and proposed integration sequences.

The companion `build.json` and the portable HTML contain the complete input hashes and runtime image identities. Each PDF screenshot anchor includes its original PNG hash.

THE HABIT TO TAKE AWAY

Connect a member's need to an accountable actor, an authorised decision, a business record and a reconciled outcome.

PF Life · CTO orientation handbook · 2026-09-30

Synthetic demonstration and repository synthesis. Source authority and observed behaviour remain separate.
